Fresh Strategy

BUILD YOUR FIRST AI TEAM.

One outcome. Specialist roles. You decide. Fill this in for one piece of work you do every week, then try it with the AI tools you already have.

SMALL. ☐
One AI, one task. Get one task working before you build a team.

REVERSIBLE. ☐
Whatever it changes, you can take back in one step.

REVIEWED. ☐
It proposes and drafts. You sit between the draft and the send button.

01 OUTCOME

What result do you want? One sentence, something you can check when it is done.

Example from the talk: **A post worth publishing.**

02 JOBS, ROLES, TEAM

Break the outcome into jobs. Give each job to one specialist role. Note what it gets and who it hands on to. The last job stays yours.

JOB	ROLE	GETS	HANDS ON TO
Research	Researcher	Topic, sources to watch	Analyst
Decide	● You		

03 DESIGN THE WORK AROUND IT

The workflow is the order and the handoffs. A team becomes a system when the work around it is designed too.

CONTEXT What does every role need to know before it starts?

RULES What must always happen? What must never happen?

DECISIONS ○ AI may decide ● you must decide

EXCEPTIONS When does it stop and ask you?

CHECKS How do you see that it is done, not just told it is done?

04 WHO OWNS THE RESULT?

If the answer is not a person, the design is not finished.

LEARN, Start experimenting.
CREATE, Start thinking systems.
LEAD. Start thinking orchestration.

Do not paste confidential or personal data into AI tools you have not cleared for it.
